

BIOCHEMISTRY & MOLECULAR BIOLOGY...NOW WHAT?

| Quick Facts: Biochemists and Biophysicists | |
|--|-------------------------|
| 2020 Median Pay | \$94,270 per year |
| Entry-Level Education | Doctoral degree |
| Work Experience in a Related Occupation | None |
| On-the-job Training | None |
| Number of Jobs, 2019 | 34,600 |
| Job Outlook, 2019-29 | 4% (As fast as average) |
| Employment Change, 2018-28 | 1,400 |

[Found on the Occupational Outlook Handbook, <https://www.bls.gov/ooh/life-physical-and-social-science/biochemists-and-biophysicists.htm>]

What is Biochemistry? Biochemistry explores the chemical processes within and related to living organisms, and focuses on processes happening at a molecular level. It is a laboratory based science that uses chemical knowledge and techniques, to understand and solve biological problems. Biochemistry covers a range of scientific disciplines, including genetics, microbiology, forensics, plant science and medicine. It focuses on what's happening inside our cells, studying components like proteins, lipids and organelles. It also looks at how cells communicate with each other, for example during growth or fighting illness. Biochemists and biophysicists study the chemical and physical principles of living things and of biological processes.

What do biochemists do? Biochemists seek to understand how the structure of a molecule relates to its function, allowing them to predict how molecules will interact. They provide new ideas and experiments to understand how life works, support our understanding of health and disease, and contribute innovative information to the technology revolution. Working on interdisciplinary teams with experts in other fields, such as physics, chemistry, healthcare, computer science, and engineering, biochemists use electron microscopes, lasers, and other laboratory technologies to carry out research, scientific experiments, and analysis. For example, they use computer modeling software to determine the three-dimensional structures of proteins and other molecules. Biochemists and biophysicists involved in biotechnology research use chemical enzymes to synthesize recombinant DNA.

Biochemists and biophysicists work in basic and applied research. Basic research is conducted without any immediately known application; the goal is to expand human knowledge. Applied research is directed toward solving a particular problem.

Biochemists, sometimes called molecular biologists or cellular biologists, may study the molecular mechanisms by which cells feed, divide, and grow. Others study the evolution of plants and animals, to understand how genetic traits are carried through successive generations.

Biophysicists may conduct basic research to learn how nerve cells communicate or how proteins work. Biochemists and biophysicists who conduct basic research typically must submit written grant proposals to

colleges and universities, private foundations, and the federal government to get the money they need for their research.

Biochemists typically do the following:

- Plan and conduct complex projects in basic and applied research
- Manage laboratory teams and monitor the quality of their work
- Isolate, analyze, and synthesize proteins, enzymes, DNA, and other molecules
- Research the effects of substances such as drugs, hormones, and food on tissues and biological processes
- Prepare technical reports, research papers, and recommendations based on their research
- Present research findings to scientists, engineers, and other colleagues

What is Molecular Biology? Cell and Molecular Biology is an interdisciplinary field that bridges the fields of chemistry, structure and biology as it seeks to understand life and cellular processes at the molecular level, paying special attention to how molecules control a cell's activities and growth. With a focus on coordination of the activities that form the essential systems of a living cell, molecular biologists work to define the underlying mechanisms of human disease, to identify new therapeutic targets responsible for disease, and to lay a foundation for the development of novel therapies. This field is rapidly providing important new insights into the basis and treatment of numerous human diseases, including cancer, diabetes, cardiomyopathies, retinal degeneration, muscular dystrophy, cystic fibrosis, and mental retardation.

What does a molecular biologist do? Molecular biologists conduct research and academic activities. The research component involves the study of biological structures in well-equipped laboratories with advanced technology to help them explore complex molecular structures and their particular functions. The equipment may include microscopes, lab centrifuges, computers with specific software that allows them to analyze obtained data, and many more. The reason why research in molecular biology is so important is because the concepts discovered in this manner can be applied to mainstream biology, medicine, wildlife study and protection of endangered animals, food industry, pharmaceutical industry and environment protection.

A molecular biologist can also conduct academic work such as teaching, workshops, practical demonstrations in universities, at conferences, and in governmental agencies. This component requires the ability to explain the molecular concepts of biology in an easy-to-understand way for people who may need such knowledge in their field of study and work. At some point in their careers, doctors, environmental experts, biologists, bio-engineers and other professionals have been trained by a molecular biologist. Molecular biologists may also formulate and elaborate specific strategies or protocols in governmental agencies using their ability to understand biological processes at the molecular level.

What Can I Do With A Degree In Biochemistry and Molecular Biology (BMB)?

- Anesthesiologist
- Biochemist
- Biomedical Engineer
- Chemist
- Clinical Research Specialist
- College Professor
- Cytologist
- Dairy Technologist
- Geneticist
- Laboratory Supervisor
- Patent Attorney
- Perfumer
- Pharmaceutical Sales Rep.
- Pharmacist
- Physician

- Process Development Specialist
- Regulatory Affairs Specialist
- Product Development Manager
- Science Teacher
- Quality Control Inspector
- Toxicologist

Important Note: Bachelor's and master's degree holders qualify for some entry-level positions in biochemistry and molecular biology. However, biochemists and molecular biologists generally need a Ph.D. to work in independent research and development. After earning the PhD, many scientists in this field seek to fill a temporary postdoctoral research position (2-3 years) at a university

Who Could I Work For?

- Government Agencies including:
 - Centers for Disease Control
 - Department of Agriculture
 - Department of Defense
 - Department of Health and Human Services
- Bio-Tech Companies
- Colleges and Universities
- Environmental Management Firms
- Energy Companies
- Forensic Labs
- Hospital
- Law Firms
- Drug Enforcement Agency
- Environmental Protection Agency
- Food and Drug Administration
- National Cancer Institute
 - Chemical Engineering Firms
 - Non-profit Organizations
 - Perfumes and Cosmetic Companies
 - Pharmaceutical Companies
 - Agriculture
 - Food institutes

Where Might I Do An Internship?

UMass Amherst Biochemistry and Molecular Biology Majors Have Done Internships at these sites:

| | | |
|------------------------------------|---|---|
| Abbott Laboratories | Eastman Chemical Company | UMass Amherst Emergency Medical Services |
| Alexion Pharmaceuticals | EMD Millipore | UMass Amherst Environmental Health & Safety |
| American Friends Service Committee | GlycoSolutions Corp | UMass Amherst Green Office Program |
| Amgen Inc. | Horace Mann Educated Financial Solutions | UMass Amherst Student Legal Services |
| Amherst (Town of) | invICRO, LLC | UMass Medical School (Worcester) |
| Baystate Medical Center | MASSPIRG | US Army: Natick Soldier Center |
| Boston Biochem | Pfizer | UTC Aerospace Systems |
| Broad Institute | Riken | |
| CFRx | Sanofi Group (Pasteur & Genzyme) | |
| Children's Hospital Boston | Scripps Research Institute | |
| Coastal America Foundation | Stanford University | |
| Cubist Pharmaceuticals | U of Texas SW: Grad School for Biomed Science | |
| Dana-Farber/Harvard Cancer Center | | |

Important Transferable Qualities To Include On Your Resume

Analytical skills. Biochemists must be able to conduct scientific experiments and analyses with accuracy and precision.

Critical-thinking skills. Biochemists draw conclusions from experimental results through sound reasoning and judgment.

Interpersonal skills. Biochemists typically work on research teams and need to be able to work well with others toward a common goal. Many also serve as team leaders and must be able to motivate and direct other team members.

Math skills. Biochemists regularly use complex equations and formulas in their work, and they need a broad understanding of mathematics, including calculus and statistics.

Perseverance. Scientific research involves substantial trial and error, and biochemists must not become discouraged in their work.

Problem-solving skills. Biochemists use scientific experiments and analysis to find solutions to complex scientific problems.

Speaking skills. Biochemists frequently give presentations and must be able to explain their research to others.

Writing skills. Biochemists write memos, reports, and research papers that explain their findings.
